

GLOW OASIS

Technical Specifications and Assembly Instructions

Construction:

1. Ensure that the chosen construction site meets the requirements for Glow Oasis.
2. Place the wooden frame at the desired location.
3. Align it horizontally using a spirit level and leveling wedges.
4. Confirm that the cables are exposed and not compressed.
5. Now, position Glow Oasis on the frame and fill it.

Notes:

- Ensure that your power supply is equipped with a residual current device.
- We strongly recommend checking the maximum floor load on terraces or wooden surfaces before installing Glow Oasis. This ensures the safety and stability of your installation.
- Please note that if temperatures drop below freezing (0 degrees Celsius), it is necessary to drain and cover your Glow Oasis.
- Dry the pump and place it in a bag, sealing it with tape around the cable. This ensures damage-free winter storage.
- Wastewater from the exterior and overflow must be captured and discharged professionally.
- Not suitable for children under 10 years of age.
